Ideal for providing a firm surface on grass runways, taxiways, helipads and parking areas

- § durable, all weather surface prevents rutting
- § increased flying season and revenue
- § safer, more secure take-off and landing surface
- § secure interlocking tiles prevent standing edges
- § tiles do not rot, UV and frost resistant
- § grass grows back through the tiles within weeks, preserving the character of grass airstrips
- § tiles allow water to pass through them. Natural drainage maintained
- § planning permission not normally required
- § self-anchoring – no additional materials or fixing required
- § airfield's own labour force can install the system in a short time
- § tiled matting can normally be rolled or pressed into unprepared soft grass surface
- § tiles can be removed later, if required
- § low cost when compared to alternative surfacing options

Easy to install in 3 simple steps

Transforms soft ground into a stable base

Grass grows back through the tiles
